Project Files

<https://s3-us-west-2.amazonaws.com/secure.notion-static.com/eb073e33-3dec-41e1-8684-68019dd82f2f/utswebprog.zip>

a. Project Initialization

1. Creating Project with Composer

```
composer create-project laravel/laravel utswebprog
```

2. Start XAMPP for Apache and MySQL
3. Create new Database called "dbutswebprog"
4. Change `.env` settings to match MySQL credential

```
DB_CONNECTION=mysql
DB_HOST=127.0.0.1
DB_PORT=3306
DB_DATABASE=dbutswebprog
DB_USERNAME=root
DB_PASSWORD=
```

5. Running the PHP

```
php artisan serve
```

b. Database Configuration

1. Creating model for the table as well as the migration file and the seeder file.

```
php artisan make:model -m -s -c Category
php artisan make:model -m -s -c Book
php artisan make:model -m -s -c Detail
```

Migrations

2. Creating Migration for `categories` table

```

public function up()
{
    Schema::create('categories', function (Blueprint $table) {
        $table->id();
        $table->string("category",255);
    });
}

```

3. Creating Migration for `books` table

```

public function up()
{
    Schema::create('books', function (Blueprint $table) {
        $table->id();
        $table->foreignId('category_id');
        $table->foreign('category_id')->references('id')->on('categories');
        $table->string('title',255);
    });
}

```

4. Creating Migration for `details` table

```

public function up()
{
    Schema::create('details', function (Blueprint $table) {
        $table->id();
        $table->foreignId('book_id');
        $table->foreign('book_id')->references('id')->on('books');
        $table->string('author',255);
        $table->string('publisher', 255);
        $table->integer('year');
        $table->longText('description');
    });
}

```

c. SQL ERD

d. Seeders

5. Filling up seeders for `details` table

```
public function run()
{
    $data = [
        ['category' => "Fiction"],
        ['category' => "Science"],
        ['category' => "Computer"],
        ['category' => "Self-help"],
        ['category' => "Business"],
        // ...
    ];
    DB::table('categories')->insert($data); // Query Builder approach
}
```

6. Filling up seeders for `books` table

```

public function run()
{
    $data = [
        ['category_id'⇒ "1", 'title'⇒ "ZZ (Paperback)"],
        ['category_id'⇒ "1", 'title'⇒ "A Suitable Boy (A Suitable Boy, #1)"],
        ['category_id'⇒ "2", 'title'⇒ "Go Down, MosesGo Down, Moses (Paperback)"],
        ['category_id'⇒ "2", 'title'⇒ "CigarettesCigarettes (Paperback)"],
        ['category_id'⇒ "3", 'title'⇒ "The Savage DetectivesThe Savage Detectives (Hardcover)"],
        ['category_id'⇒ "3", 'title'⇒ "The False Prince"],
        ['category_id'⇒ "4", 'title'⇒ "Fifty Shades of Grey"],
        ['category_id'⇒ "4", 'title'⇒ "Act Your Age, Eve Brown: A Novel"],
        ['category_id'⇒ "5", 'title'⇒ "American Dirt (Oprah's Book Club): A Novel"],
        ['category_id'⇒ "5", 'title'⇒ "BowLaway: A Novel"],
        //...
    ];
    DB::table('books')⇒insert($data); // Query Builder approach
}

```

7. Filling up seeders for `details` table

```

public function run()
{
    $data = [
        ['book_id'⇒ "1", 'author'⇒ "Vassilis Vassilikos" , 'publisher'⇒ 'Judi Rhodes', 'year'⇒2003, 'description'⇒ 'The ord
        ['book_id'⇒ "2", 'author'⇒ "Douglas Adams" , 'publisher'⇒ 'Illinois Historic Preservation Agency', 'year'⇒2010, 'de
        ['book_id'⇒ "3", 'author'⇒ "Orhan Pamuk" , 'publisher'⇒ 'Rabenold&binder P.c', 'year'⇒2021, 'description'⇒ 'The sec
        ['book_id'⇒ "4", 'author'⇒ "Alejo Carpentier" , 'publisher'⇒ 'Advanced Multimedia Concepts Inc', 'year'⇒2007, 'desc
        ['book_id'⇒ "5", 'author'⇒ "Ally Carter" , 'publisher'⇒ 'Liftedsites', 'year'⇒2004, 'description'⇒ 'The carefree li
        ['book_id'⇒ "6", 'author'⇒ "Karen Russell" , 'publisher'⇒ 'Cosmos Systems Softwares Ltd', 'year'⇒2008, 'description
        ['book_id'⇒ "7", 'author'⇒ "Melissa Broder" , 'publisher'⇒ 'Stewart Enterprises', 'year'⇒2002, 'description'⇒ 'The
        ['book_id'⇒ "8", 'author'⇒ "Nathan Hill" , 'publisher'⇒ 'Modern Machine Shop', 'year'⇒2007, 'description'⇒ 'The sec
        ['book_id'⇒ "9", 'author'⇒ "Henry Miller" , 'publisher'⇒ 'Cfa Corporation', 'year'⇒2006, 'description'⇒ 'The laid-b
        ['book_id'⇒ "10", 'author'⇒ "Marcel Proust" , 'publisher'⇒ 'Os Lubrano', 'year'⇒2015, 'description'⇒ 'The relaxed li
        //...
    ];
    DB::table('details')⇒insert($data); // Query Builder approach
}

```

8. Configuring the Central `DatabaseSeeder.php`

```

public function run()
{
    $this⇒call(CategorySeeder::class);
    $this⇒call(BookSeeder::class);
    $this⇒call(DetailSeeder::class);
}

```

e. Model Configuration

1. Creating relationship of the `Detail` model using `HasFactory`

```
class Detail extends Model
{
    use HasFactory;
    public function detail(){
        return $this->belongsTo(Book::class);
    }
}
```

2. Creating relationship of the `Book` model using `HasFactory`

```
class Book extends Model
{
    use HasFactory;
    public function detail(){
        return $this->hasOne(Detail::class);
    }
    public function category(){
        return $this->belongsTo(Category::class);
    }
}
```

f. Route Configuration

```
Route::get('/', [ViewController::class, 'displayHome']);
Route::redirect('/category', '/');
Route::redirect('/book', '/');

Route::get('/category/{category}', [ViewController::class, 'displayCategory']);
Route::get('/book/{book}', [ViewController::class, 'displayBook']);

Route::get('/contact', [ViewController::class, 'displayContact']);
```

g. View Controller

1. Create Controller

```
<?php

namespace App\Http\Controllers;

use App\Models\Book;
use App\Models\Category;
use Exception;
use Illuminate\Support\Facades\DB;

class ViewController extends Controller
{
}
}
```

2. Get and Set Category (so that it supports dynamic category)

```
private $cached_category;

public function setCategory(){
    $this->cached_category = DB::table('categories')->get();
}

public function getCategory(){
    return $this->cached_category;
}
```

3. Create controller function to display per-category book list

```

public function displayCategory(int $category){
    $data = [];
    $this->setCategory();
    try{
        $data = Category::where('id',$category)->get();
    }catch(Exception $e){
    }
    return view('category',['data'=>$data]);
}

```

4. Create controller function to display home page

```

public function displayHome(){
    $this->setCategory();
    return view('home',[
        'data'=>Book::paginate(3)
    ]);
}

```

5. Create controller functions to display book details

```

public function displayBook(int $book){
    $data = [];
    $this->setCategory();
    try{
        $data = Book::where('id',$book)->get();
    }catch(Exception $e){
    }
    return view('book',['data'=>$data]);
}

```

6. Create controller function to display the contact page view

```

public function displayContact(){
    return view('contact');
}

```

h. Creating the Blade View

1. Creating a global variable that can be used in every blade view

In `app/Providers/AppServiceProvider.php`,

```
public function boot()
{
    $view = new ViewController();
    $view->setCategory();
    $data = $view->getCategory();
    View::share('categories', $data);
}
```

2. Creating the layout template blade page so that every page can have the same sidebar, header and footer

a. Importing fonts

```
<link rel="preconnect" href="https://fonts.googleapis.com">
<link rel="preconnect" href="https://fonts.gstatic.com" crossorigin>
<link href="https://fonts.googleapis.com/css2?family=Oswald:wght@200;300;400;500;600;700&family=Roboto+Condensed:ital,wght@0,300;0,400;0,700;1,300;1,400;1,700&display=swap" rel="stylesheet">
```

b. Importing icons

```
<link href="https://fonts.googleapis.com/css2?family=Material+Icons+Round" rel="stylesheet">
```

c. Creating a stylesheet

```
a{text-decoration: none;color: #204380;font-weight: 500;}
hr{margin:20px 0 20px 0;}
.heading-2{font-size:1.8em;font-weight: 500;margin-bottom:10px;color: #5E81AC}
.heading-3{font-size:1.4em;font-weight: 500;margin:0px 0px 10px 0px;display:flex;align-items: center}
.heading-3 span{margin-right:8px;color: #5E81AC}
.paragraph{margin-bottom:40px;line-height: 1.4em;}
.navbar-item-dropdown {display:none;position: absolute;background-color: #E5E9F0;z-index: 1;width:100%;}
.navbar-item-dropdown-item{padding:10px 0px;}
.navbar-item span{padding-right:5px;}
.navbar-item{display:flex;flex-direction: row;justify-content: center;width:100px;text-align:center}
.navbar-item:hover{background-color: #E5E9F0;}
.navbar-item:hover::before{content:'>';padding:0px 10px;}
.navbar-item:hover::after{content:'<';padding:0px 10px;}
.navbar-dropdown{ border-radius:10px 10px 0 0; }
.navbar-dropdown:hover{background-color: #E5E9F0;}
.navbar-dropdown:hover .navbar-item-dropdown{display:block;box-shadow:0px 10px 20px -10px rgba(0,0,0,0.1);}
.navbar-item-dropdown-item{width:100%;will-change: background-color;transition: background-color 0.3s;}
.navbar-item-dropdown-item:hover{border-radius:10px;background-color: #E5E9F0;color: #112d5e;}
```

```
.navbar-item-dropdown-item:hover{border-radius:10px;background-color:■ #E5E9F0;color:■ #112d
.navbar-item-dropdown-item:hover::before{content:'>';padding:0px 10px;}
.navbar-item-dropdown-item:hover::after{content:'<';padding:0px 10px;}
.content-box{padding:32px;border-radius: 30px;background-color: ■ white;margin: 20px 20px;he
.sidebar-item{will-change: transform;transition: transform 150ms ease-out;}
.sidebar-item:hover::before{position:absolute;margin-left:-10px;content:'> '};
.sidebar-item:hover{transform: translateX(10px);}
.sidebar-item::before{content:'';position:absolute;margin-left:-10px;}
.material-icons-round{margin-top:-3px;}
.book-item{background-color:■ #f9f9f9}
.book-item:hover{background-color:■ #E5E9F0}
.book-detail{padding:6px 0px;}
```

d. Creating the header

```
<div class="header" style="text-align:center; font-family: 'Oswald', 'Segoe UI', Tahoma, Geneva,
    HAPPY BOOK STORE
</div>
```

e. Creating the Navbar

```
<a href="/"><div class="navbar-item" style="color:■ #B48EAD;"><span class="material-icons-round
<a href="#"><div class="navbar-item navbar-dropdown" style="color:■ #D08770;">...
</div></a>
<a href="/contact"><div class="navbar-item" style="color:■ #A3BE8C;"><span class="material-
```

i. Creating the dropdown

```
<a href="#"><div class="navbar-item navbar-dropdown" style="color:■ #D08770;">
    <div class="" style="border-radius:10px 10px 0px 0px; display:flex;flex-direction:row;co
        <span class="material-icons-round">category</span>
        <div>Category</div>
        <span class="material-icons-round">expand_more</span>
    </div>
    <div class="navbar-item-dropdown">
        @foreach ($categories as $category)
            <a href="/category/{{ $category->id }}"><div class="navbar-item-dropdown-item">{{$c
        @endforeach
    </div>
</div></a>
```

f. Creating Placeholder for body of the template

```
<div class="content-box" style="width:600px;">
    @yield('body')
</div>
```

g. Creating Sidebar

```
<div class="content-box">
    <div class="heading-3" style="color:#5E81AC">Categories</div>
    <hr>
    <div style="display:flex;flex-direction:column;width:140px">
        @foreach ($categories as $category)
            <a href="/category/{{ $category->id }}" style="padding:6px;" class="sidebar-item">
                {{ $category->category }}
            </a>
        @endforeach
    </div>
</div>
```

h. Creating Footer

```
<div class="footer" style="width:100%;text-align:center;padding:10px 0px;color:#4C566A">
    (c) Alfonsus Ardani 2021
</div>
```

3. Creating home page using blade template

```
@extends('layout')
@section('body')
    <div class="heading-2"> Book List</div><hr>
    @foreach ($data as $d)...
    @endforeach
    <div class="pagination" style="display:flex;flex-direction:row; justify-content:center; align-items:center">
    </div>
@endsection
```

a. Listing all of the book entries

```
<div class="heading-2"> Book List</div><hr>
@foreach ($data as $d)
    <a href="/book/{{ $d->id }}">
        <div class="book-item" style="border-radius:20px;padding:20px;margin-bottom:10px">
            <div class="heading-3 book-title" style="padding:0px;">{{ $d->id }}. {{ $d->title }}</div>
            <div class="book-author" style="padding:0px;">{{ $d->detail->author }}</div>
        </div>
    </a>
@endforeach
```

b. Pagination

```
<div class="pagination" style="display:flex;flex-direction:row; justify-content:center; align-items
    @if ( empty($data->previousPageUrl() )
        <div class="navbar-item" style="padding:10px;display:flex;">Prev</div>
    @else
        <a href="{{ $data->previousPageUrl() }}"><div class="navbar-item" style="width:30px"><span
    @endif
    <div style="padding:10px 10px 10px 20px;">Page: {{ $data->currentPage() }}</div>
    @if ( empty($data->nextPageUrl() )
        <div class="navbar-item" style="padding:10px;display:flex;">Next</div>
    @else
        <a href="{{ $data->nextPageUrl() }}"><div class="navbar-item" style="width:30px">Next<span
    @endif
</div>
```

4. Creating per-category using blade template

```
@extends('layout')
@section('body')
    <div class="heading-2">{{ $data[0] -> category }}</div><hr>
    @if ($data[0] -> book -> isEmpty())
        Data is empty.
    @else
        @foreach ($data[0] -> book as $d)
            <a href="/book/{{ $d -> id }}">
                <div class="book-item" style="border-radius:20px;padding:20px;margin-bottom:10px">
                    <div class="heading-3 book-title" style="padding:0px;">{{ $d -> id }}. {{ $d -> title }}</div>
                    <div class="book-author" style="padding:0px;">{{ $d -> detail -> author }}</div>
                </div>
            </a>
        @endforeach
    @endif
@endsection
```

5. Creating book details using blade template

```
@extends('layout')
@section('body')
    <div class="heading-2">Book Detail</div><hr>
    <div class="book-detail"><b>Title: </b>{{ $data[0] -> title }}</div>
    <div class="book-detail"><b>Author: </b>{{ $data[0] -> detail -> author }}</div>
    <div class="book-detail"><b>Publisher: </b>{{ $data[0] -> detail -> publisher }}</div>
    <div class="book-detail"><b>Year: </b>{{ $data[0] -> detail -> year }}</div>
    <div class="book-detail"><b>Description: </b></div>
    <div class="book-detail">{{ $data[0] -> detail -> description }}</div>
@endsection
```

6. Creating Contact Details using Blade Template

```
@extends('layout')
@section('body')

    <div class="heading-2"> Contact</div><hr>

    <div class="heading-3"><span class="material-icons-round">location_on</span><div>Store Address:</div>
    <div class="paragraph">
        Jalan Pembangunan Baru Raya,<br>
        Kompleks Pertokoan Emerald Blok 11/12<br>
        Bintaro, Tangerang Selatan<br>
        Indonesia <br>
    </div>

    <div class="heading-3"><span class="material-icons-round">schedule</span><div>Open Daily:</div></div>
    <div class="paragraph">
        08.00 - 20.00
    </div>

    <div class="heading-3"><span class="material-icons-round">perm_contact_calendar</span><div>Contact:</div>
    <div class="paragraph">
        Phone: 021-08899776655<br>
        Email: happybookstore@happy.com
    </div>
@endsection
```
